

Do you know what toxic chemicals you have used today???

Are you buying a skin care product or a cancer provider ???

Have you checked your skin care products for these 8 commonly used toxins???

Toxic Chemicals	Found in	Harmful Effects
Sodium Lauryl Sulfate (SLS)	Found in 90% of personal care products that foam - soaps, bodywashes, shower gels, shampoos etc.	SLS is used for 3 reasons - it is cheap, it makes the mixture foam well and thicken it appreciably. It have several side effects - improper eye development in children, cataract, nitrate absorption (nitrates are known carcinogenic agents), penetration into systemic tissues (brain, heart, liver) , skin irritation and skin dryness. It is used in car washes, as garage floor cleaners and engine degreasers.
Paraben preservatives (Methyl, Propyl, Butyl, and Ethyl)	Widely used in almost every commercial skin care product!	They can increase the tendency of developing estrogen-dependent diseases like breast tumors , decrease the sperm cell count among males, disrupts hormones, promote skin allergic reactions like contact dermatitis and rosacea, spur the development of skin cancer and cause problems to foetal development for pregnant women.
Silicone Derived Emollients - (Dimethicone, Dimethicone Copolyol, Cyclomethicone)	Found in a majority of hair, skin & beauty products.	Silicone emollients are occlusive - i.e. they coat the skin, trapping anything beneath it, and do not allow the skin to breathe. Some synthetic emollients are known tumour promoters and accumulate in the liver and lymph nodes. They are also non-biodegradable, causing negative environmental effects.
Mineral Oil (Petrolatum, Petroleum, Paraffin Wax, Liquid Paraffinum, Parrafin Oil)	Found in petroleum jelly and other petroleum based products, creams, lotions etc. Most baby oils are made up of 100% mineral oil!	Petroleum by-products coat the skin like plastic, clogging the pores. They interfere with skin's ability to eliminate toxins, promoting acne and other disorders. They also slow down skin function and cell development, resulting in premature aging . Any mineral oil derivative can be contaminated with carcinogenic agents . Most manufacturers use petrolatum because it is unbelievably cheap.
MEA, TEA	Found in bubble baths, shampoos, soaps, facial cleansers, creams etc.	These are hormone-disrupting chemicals and form cancer-causing agents . They also cause allergic reactions including eye problems, dryness of hair and skin.
Alcohol	Found in lotions, perfumes, mists, toners, gels etc.	A very drying and irritating solvent and dehydrator that strips your skin's natural acid mantle, making you more vulnerable to bacteria, moulds and viruses.
Urea	Commonly found in skincare, bodycare and haircare products, antiperspirants and nail polish.	Contains known carcinogenic agents . Diazolidinyl urea has been established as a primary cause of contact dermatitis .
Linalool	Found in in perfumes, soaps, shampoos, lotions, air fresheners etc.	This is a known narcotic. It causes central nervous system disorder and respiratory disturbances in some cases leading to death.

Product	Quantity	MRP (Rs.)
Lotions & Creams		
Vanilla Orange	100ml	150
Cucumber	100ml	150
Bourbon	100ml	150
Raspberry	100ml	150
Body Salve	50g	200
Soft Cream	60g	200
Massage Oils
